### **DETAILED ACTION**

1. This action is in response to applicant's response filed on January 26, 2006. **Claims 1-4,6-14,16-25** are now pending in the present application.

#### ***Drawings***

2. Since this application has been allowed, new formal drawings in compliance with 37 CFR 1.121(d) are required in this application. The formal drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William J. Daley on February 9, 2007.

The application has been amended as follows:

Cancel claims 26-31

### **REASONS FOR ALLOWANCE**

Art Unit: 2614

4. The following is an examiner's statement of reasons for allowance: the application is allowable for the reasons set forth on pages 8-11 of the Applicant's response filed on January 26, 2007.

*Regarding claims 1 and 11*, as noted therein, the claimed invention requires *inter alia* managing a telephone call from a calling station to a called station connected to a data network comprising, forwarding a telephone call to an application server regardless of the connection status of the called station, at the application server obtaining Internet information, sending a screen viewable query, and providing logging information related to the telephone call and the disposition of the call wherein the logging information is viewable via the data network whereas the closest prior art Shtivelman teaches of an Internet call waiting system which forwards a call to an application server upon determining that the called party is on the Internet, and hence does not teach of sending the call to an application server regardless of the connection status. Shtivelman also does not provide any suggestion or motivation to do so since the system will only send the call to the server upon receiving status information about the called party.

Regarding the prior art Norris, a call is sent to an application server upon determining that the telephone line of the called party is busy providing Internet service to the called party. Therefore, Norris, like Shtivelman determines the status of the called party before forwarding the call to the application server.

Combar provides for accessing call disposition information over a data network. Combar does not teach of forwarding a telephone call to a server regardless of a connection status of the called station.

Art Unit: 2614

Therefore, the relied upon references fails to teach of forwarding a telephone call to an application server regardless of the connection status of the called station in combination with having a user view disposition information that was related to the telephone call.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
